

Glues for electrical modules

- Different glues used to glue irradiated modules (depending on method)
- Candidates of interest for next irradiation tests, all where in neutron irradiation:
 - Araldite 2011 (used in Glasgow and at KEK (full module irradiations started))
 - UHU Endfest 300 (6 lap joints ready), PPI RD-577F (?) (used in Bonn and at CERN)
 - Tape (sample tested up to $5e15$ neq/cm², $1e16$ ongoing, used at MPP)
 - 1. Tesa 4962
 - 2. 3M VHB 5909
- Interesting tests are composition and mechanically stability after irradiation
